

## **RES Expands to New Office Space in Raleigh, NC**

July 22, 2015 Raleigh, N.C.-- The RES teams supplying ecological offsets in North Carolina for unavoidable project-related impacts to wetlands, streams and habitats have moved into larger office to accommodate our growth. RES wetland scientists, biologists, land representatives, and credit sales teams are now all housed in our new space located at 302 Jefferson Street. This location provides easy access for our traveling teams and is central to RES operating areas across the state. RES is the nation's leading provider of ecological offset solutions, operates in nine states and helps permittees achieve permitting goals when operating in environmentally sensitive areas.

RES develops and supplies ecological offsets to help developers obtain required permits for unavoidable project-related impacts. RES has restored and conserved more than 40,000 acres of wetlands, streams, and habitats. For more information, visit [www.res.us](http://www.res.us) or contact Russ Krauss at 713.986.9222
