

# 5 Easy Steps to Planting a Tree

*Cypress trees live a long time, grow slowly and turn into massive trees. So, when you select a place to plant them make sure they have plenty of room to grow.*

1. Choose a site with full sun to partial shade
2. Dig a hole about twice the size of the container
3. Remove the container and place the tree inside the hole
4. Gently place soil around the tree packing it lightly so the tree remains upright
5. Water the tree slowly

*Be sure to water the tree frequently, it can withstand intermittent periods of drought, but does like a moist soil.*
