

December 16, 2024

Dear Neighbor,

The Montgomery County Department of Environmental Protection (DEP) has identified the **Williamsburg Run Stream** in the Rock Creek Watershed for restoration. The existing conditions within Williamsburg Run Stream exhibit highly eroding stream banks with an incised stream channel that limits interaction between the stream and the adjacent floodplain.

The primary goals of the stream restoration are to stabilize the bank and bed of the stream, enhance floodplain connectivity, and reduce pollutants and sediment. Additionally, this project will significantly improve your community's environment by enhancing biodiversity, creating habitat, and improving water quality. By implementing natural stream restoration techniques on Williamsburg Run, we will be working to improve and maintain our water resources' ecological integrity, quantity, and quality. Additional information regarding this project can be found at <https://res.us/mococounty/>

Your participation is crucial to the success of this project. We invite you to a virtual public meeting to learn more about the enhancements planned for this stream retrofit. Your insights and feedback will be greatly appreciated. We look forward to seeing you at this informative meeting.

Date: January 8, 2025

Time: 7 p.m.

Platform: Virtual. Please use the link below or scan the QR code to RSVP.
